INTRODUCTION

This is the third compilation of theses and dissertations in the holdings of The Army Library. The previous one was published in February 1961 and consisted of cumulated materials dating back to July 1957. Requests for copies of the 1961 edition still continue to come in. To satisfy the interest and the demand it was decided that a new cumulative listing of current and old holdings would best serve the purpose.

This enlarged edition contains 836 items ranging by subject from military arts and sciences through social and physical sciences and the humanities.

These theses and dissertations were prepared under the program supervised by the Office of the Assistant Chief of Staff for Force Development as described in AR 350-200 (26 April 1965). The Army Library serves as the recipient of these papers, copies of which are submitted to it by students participating in the program.

The manuscripts which are listed in this edition constitute a rich source of research and should prove of great value to planners, policy makers, and technologists by pointing up the new trends and ideas, and should also prove equally valuable to military personnel engaged in graduate work at civilian educational institutions.
